WORK EXPERIENCE

Temus – Temasek & UST

Associate AI Engineer

July 2025 - Present

- Architected and delivered a production-grade, RAG-based multi-agent investment analysis platform for Temasek using the OpenAI Agents SDK and AWS Bedrock (Claude 3.5), with persistent memory, Perplexity web search, and SharePoint tool integration within secure AWS and Azure environments; reduced analyst workflow time costs by **40%** through automated document retrieval and multi-agent reasoning pipelines.
- Owned the end-to-end design, deployment, and production operations of a voice-to-voice AI sales training platform used by **52,000+ AIA agents** across Thailand, including infrastructure (Terraform, Kubernetes on Azure), backend APIs (FastAPI), frontend (Next.js), and GenAI services (Azure OpenAI, Azure Speech).
- Designed and productionised an internal AI-driven RAG-based talent-matching and skill-gap analysis platform leveraging LLM-based CV parsing, FastAPI, Next.js, AWS Bedrock, vector database (postgreSQL), and Celery; implemented CI/CD pipelines (CodeBuild, CodeDeploy, CodePipeline), saving **20 hours/week** of manual review effort.
- Maintained and enhanced **three reusable AI starter kits** supporting internal demos and delivery accelerators; provided stakeholder consultations, architecture guidance, and performed code reviews for major system changes.

Singapore Sport Institute

Software Developer (Internship)

May 2024 - Sep 2024

- Digitalized the IRB process with a multi-role Next.js + MySQL web portal (cutting process time by 78%) and engineered RESTful/GraphQL ETL pipelines into Oracle RDBMS to automate daily data processing for millions of rows, reducing manual effort by 90%.

HelloHolo (Startup), Microsoft Partner

Software Developer (Part-Time)

May 2022 - Jan 2024

- Engineered web and mobile software solutions for enterprise clients including **Google, DBS, OCBC, and Singpass**.

EDUCATION

Singapore University of Technology and Design (SUTD)

Sep 2021 - May 2025

- Bachelor of Engineering (Computer Science and Design), Honours
- Focus Track: Artificial Intelligence Minor, Financial Technology
- Taken Courses: Blockchain, ML, NLP, Deep Learning, AI, Database, Network
- GPA: 4.25, ASEAN Scholarship Holder

INTEREST PROJECTS & AWARD

Healthcare Communication AI Coach Simulator (Final Year Project) (Tan Tock Seng Hospital)

- Led a 5-person Agile team to develop a Spring Boot–React AI application simulating doctor-patient communication, integrating Kafka, LLMs, ElevenLabs, Docker, and AWS.
- Awarded **2nd Place** in the Design AI Award (80+ projects), presented by President Tharman Shanmugaratnam.

Singaporean Accent Text-to-Speech Model (AI Project)

- Fine-tuned Orpheus TTS (based on LLaMA 3B) using Unsloth and LoRA to generate a Singaporean-accented voice, achieving **0%** distinguishability between real and AI-generated speech in user tests.

TECHNICAL SKILLS

AI / ML: AI Agents, RAG, LLMs, OpenAI Agents SDK, LangChain, PyTorch, LoRA, NLP, model evaluation

Programming Languages: Python, JavaScript, TypeScript, Java, SQL, C, C++, Dart

Frameworks: FastAPI, PyTorch, React, Next.js, TypeScript, Spring Boot, Flutter, MongoDB, Tailwind CSS

Technology: Docker, git, UNIX shell, Software Architecture Diagram, Linux Kernel, GCP, AWS, Oracle, Azure

Certificate: Databricks Certified Machine Learning Professional
